I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

EXAMINER'S AMENDMENT

Election/Restrictions

1. This application is in condition for allowance except for the presence of claims 25-27 directed to inventions non-elected without traverse. Accordingly, claims 25-27 have been cancelled.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

1.

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jeffrey Auerbach on 6/18/2010.

The application has been amended as follows:

- The phrase"; wherein the reactive layer comprises chitosan" was added to the end of claim 1.
- Claim 3 was cancelled.
- Claim 18 was changed to read "A method for selective deposition of molecules, comprising the steps of: (a) providing a reactive layer

Art Unit: 1711

comprising a surface region coated with a resist that is biologically compatible with the reactive layer; (b) selectively removing a portion of the biologically compatible resist from the surface region to expose an exposed portion of the reactive layer; and (c) conjugating molecules with the exposed portion of the reactive layer; wherein the molecules comprise one, two, three or more antibody species.”

- Claim 19 was changed to read “A method for selective deposition of molecules, comprising the steps of: (a) providing a reactive layer comprising a surface region coated with a resist that is biologically compatible with the reactive layer; (b) selectively removing a portion of the biologically compatible resist from the surface region to expose an exposed portion of the reactive layer; and (c) conjugating molecules with the exposed portion of the reactive layer; wherein the molecules comprise one, two, three or more receptor molecule species.”
- Claim 23 was changed to read “A method for selective deposition of molecules, comprising the steps of: (a) providing a reactive layer comprising a surface region coated with a resist that is biologically compatible with the reactive layer; (b) selectively removing a portion of the biologically compatible resist from the surface region to expose an exposed portion of the reactive layer; and (c) conjugating molecules with the exposed portion of the reactive layer; wherein the reactive layer

Art Unit: 1711

comprises chitosan and wherein the molecules comprise one, two, three or more antibody species.”

- Claim 24 was changed to read “A method for selective deposition of molecules, comprising the steps of: (a) providing a reactive layer comprising a surface region coated with a resist that is biologically compatible with the reactive layer; (b) selectively removing a portion of the biologically compatible resist from the surface region to expose an exposed portion of the reactive layer; and (c) conjugating molecules with the exposed portion of the reactive layer; wherein the reactive layer comprises chitosan and wherein the molecules comprise one, two, three or more receptor molecule species.”

- a. The following is an examiner’s statement of reasons for allowance:
 - i. Regarding the claims, it is the position of the examiner that it is not known in the prior art to biologically compatible resist layers over reactive layers for the purpose of patterning the reactive layer, wherein the reactive layer is chitosan and/or where the patterned object is conjugated with antibodies and/or receptor molecules.

(1) The most pertinent prior art (Hengsakul et al.) shows that it is known to immobilize proteins and enzymes on the surface of photobiotin. However, it fails to teach the use of chitosan, antibodies, or receptor molecules.

Art Unit: 1711

(2) Another prior art, (Yang et al) shows that it is known to use gelatin as a photoresist material and to remove it with heated water.

However the document is otherwise generally unrelated.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ANDREW BOWMAN whose telephone number is (571)270-5342. The examiner can normally be reached on Monday through Friday (7:30 to 5:00)EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Barr can be reached on 571-272-1414. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
